

Improve Decision Making and Planning Ability with Configurable Real-Time Reporting

- OBDII and J-1708/1939 data collected by Fleetpulse's vehicle information unit (VIU) is stored, analyzed and presented via a comprehensive array of reports available through Fleetpulse OverVIU Information Manager
- Critical vehicle information and data including alarms, and exception reports are presented
- Web-based interface means reports can be accessed from any browser
- View real-time or historical reports and trend data over time

Open and Integrated

- Wi-fi, satellite and cellular communication options for broad-based connectivity
- Open API and third-party integrations provides maximum flexibility and enables data exchange with key back-office applications (mobile data terminals, dispatch, routing, messaging and LTL)

Fully Hosted

- Fully hosted SAAS solution
- No back-office hardware or software to install or maintain, no infrastructure to support
- Keeps costs and risks low for your fleet operation

Serving Your Industry

Transportation and Delivery Services – Precisely track routing and deliveries in real-time and optimize route planning to lower fuel consumption and boost customer service in critical delivery service markets such as long haul, LTL, courier services, office and residential moving, retail deliveries.

- **Utilities** - increase productivity and resource utilization, improve response times, and run a greener fleet through reduced idling times, fuel consumption and carbon emissions.
- **Oil and Gas** – Ensure a safe working environment for remote area personnel and ensure optimal performance of vehicles and other fleet assets in remote working regions.
- **Municipal** – Adhere to green fleet program goals and cut costs through reduced idling, fuel consumption, fewer

tailpipe emissions and improve customer satisfaction through route optimization, in municipal fleet markets such as police, EMS, snow removal, bus transportation and municipal road construction and maintenance.
